

DATA VISUALIZATION FINAL PROJECT · TMDB DATASET

Streaming Platform Content Identity

How exclusivity, genre focus, popularity, and quality distinct competitive positions across five major platforms.

RESEARCH QUESTION

Why Content Identity Is a Strategic Imperative

Core Research Question

How do streaming platforms build unique content identities — and how are those identities reflected across exclusivity, genre emphasis, popularity, and quality?

Audience

Strategy Teams of Netflix, Hulu, HBO Max, Peacock, Prime Video

Why This Matters

As the streaming market saturates, platforms must differentiate beyond price. Content identity — the strategic combination of what you offer and how audiences perceive it — is the primary lever for sustainable competitive advantage.

- 5 platforms analyzed: Netflix, Hulu, HBO Max, Peacock, Prime Video
- Source: TMDB streaming platform dataset
- 4 dimensions of differentiation measured

Dataset & Analytical Framework

The TMDB dataset provides structured metadata across five key dimensions, each capturing a distinct layer of platform strategy.

Exclusivity Share

Share of content unique to each platform

Genre Overrepresentation

Genre concentration vs. market average

Popularity

Audience attention and discoverability

Weighted Rating

Perceived quality signal

📌 **Key distinction:** Popularity reflects audience attention; weighted rating reflects perceived quality. These are independent strategic dimensions.

Dashboard Overview

POSITIONING MAP

Prestige / Niche Quality

Quality ↑

Premium Mainstream

Popularity →

2 SHARED VS. EXCLUSIVE CONTENT

EXECUTIVE INSIGHTS

Netflix dominates premium mainstream positioning
Highest combination of popularity and perceived quality.

Peacock pursues the most differentiated identity
Avoids highly contested genres while maintaining strong exclusivity.

An unoccupied market space may exist
No major platform strongly occupies the high-attention / lower-quality quadrant.

3 WEIGHTED RATING DISTRIBUTION

By platform & content type

4 POPULARITY DISTRIBUTION

By platform & content type

Each Platform Owns a Different Genre Landscape

1 TOP OVER / UNDER REPRESENTED GENRES BY PLATFORM

Reading the Chart

This visualization shows the top overrepresented and underrepresented genres for each platform compared to the market average.

- **Netflix:** Broadest genre mix, with clear strength in Drama and Documentary
- **HBO Max:** Strongest prestige lean, emphasizing Drama and Thriller
- **Hulu:** Skews toward Comedy and lighter, more accessible genres
- **Prime Video:** Leans into Action and high-variance genre coverage
- **Peacock:** More selective profile, with standout emphasis in niche or less dominant genres

Exclusive Content as a Differentiation Lever

2 SHARED VS. EXCLUSIVE CONTENT

Strategic Implications

Max and Netflix appear to use exclusivity as a differentiation strategy, making their catalogs feel more platform-specific.

Peacock and Prime Video rely more heavily on shared content, suggesting a broader aggregation strategy with less distinct catalog ownership.

Peacock & Prime Video

Highest exclusivity — building proprietary catalogs

HBO Max

Balanced — prestige originals + licensed content

Netflix

Moderate exclusivity — scale via volume and reach

Popularity vs. Perceived Quality

Perceived Quality by Platform and Format

Popularity by Platform and Format

Key insights:

- Max appears to compete more on perceived quality than mass popularity, especially through stronger movie ratings.
- Netflix and Hulu show stronger popularity performance, suggesting broader audience reach.
- Prime Video has relatively strong TV popularity but weaker perceived quality, while Peacock appears lower on both dimensions.

MAIN INSIGHT

Platform Positioning Map: Where Each Platform Competes

Netflix & Hulu – Mainstream Leaders

Netflix combines high popularity with strong perceived quality. Hulu also shows strong reach, but with a slightly lower quality position than Netflix and Max.

HBO Max – Niche Builder

Highest perceived quality, lower popularity reach. Positioned more as curated prestige than mass-market scale.

Prime Video – Broad Catalog

Moderate popularity, lower perceived quality. Competes more through catalog breadth than premium positioning.

Peacock – Differentiated Outsider

Lower popularity and lower perceived quality. Appears weaker position

Reading the Matrix

This map compares each platform's median popularity and median weighted rating. Platforms in the upper-right combine reach and perceived quality

No Platform Competes Identically

Multi-Dimensional Differentiation

Platforms differentiate simultaneously across exclusivity, genre, popularity, quality, and catalog age — not just one dimension.

Netflix Dominates Premium Mainstream

The only platform combining high popularity with strong perceived quality — the benchmark competitors must respond to.

Peacock's Deliberate Avoidance Strategy

By sidestepping dominant genres and mainstream popularity races, Peacock occupies a distinct, defensible market position.

HBO Max Chooses Prestige Over Scale

Highest weighted ratings but lower popularity — a curated, quality-first identity that trades reach for reputation.

Key Takeaways & Discussion

What We Found

1 Content identity is multi-dimensional

No single metric defines a platform's competitive position.

2 Peacock's Strategy

Peacock appears to pursue the most differentiated positioning strategy among the platforms analyzed.

3 Possible Empty Positioning

No major platform currently occupies the high-attention / lower-quality quadrant, suggesting a potential opportunity for future research and strategic positioning.

Possible Future Discussions

- Can a platform successfully compete on quality without scale?
- Is Peacock's avoidance strategy sustainable long-term?
- How should Netflix respond as competitors sharpen their identities?
- What does this mean for content acquisition and licensing strategy?
